Metropolitan Areas Economic Strength Ranking

Economic Data Marion County, Florida

Metropolitan Areas

The United States is composed of 318 defined metropolitan areas. These metropolitan areas comprise approximately 80% of the nation's population and principally represent the non-rural portion of the country.

The Office of Management and Budget defines metropolitan areas. Geographically a metropolitan area cannot be less than one county (or equivalent political subdivision) and most often is composed of multiple counties. Metropolitan areas can also span states lines, including counties from two or more states.

The most important criteria for establishing the geographic definition of a metropolitan area is to determine a "contained" economy. It is the goal in establishing metropolitan areas to create an area where a preponderance of the people live and work, earn and spend. It is an area where economic activity is principally contained in a definable geographic area.

This is accomplished by reviewing the commuting trends among counties. One county might serve as the source of employment with people living in bordering counties driving from one county to another. All of the counties involved are included in the metropolitan area.

Typically a metropolitan area is identified in name by the largest central city in the area. However, many areas have multiple city names and some areas bear its county name.

There are four types of metropolitan areas. All are referred to by government as "metropolitan areas" but there are some differences.

MSA: Metropolitan Statistical Area. This is the most frequent metropolitan area. It is not less than one county and a preponderance of the economic activity is contained within the geographic definition.

NECMA: New England County Metropolitan Area. The same as an MSA but it is composed of counties in New England, hence the name.

PMSA: Primary Metropolitan Statistical Area. This area meets the definition of an MSA but it has been determined there is significant economic linkage with an adjoining metropolitan area. The economy is not as "contained" as an MSA. However, the linkage is not sufficient enough to join the two areas into one MSA. Each metropolitan area which has this linkage is called a PMSA.

CMSA: Consolidated Metropolitan Statistical Area. This area includes adjoining PMSA's. Since there is linkage among PMSA's, data is totaled and published for the consolidated area. Sometimes they are called "major metropolitan areas."

Economic Strength Ranking

POLICOM Corporation annually measures and ranks the "Economic Strength" of the 318 metropolitan areas for the purpose of studying the characteristics of strong and weak economies. Economic strength is a combination of both the rate of growth and the consistency of the growth. Simplistically, the formula is "Growth – Instability = Strength."

To determine the economic strength for the metropolitan areas, 25 years of data is examined. The average annual growth rate and the average annual deviation are calculated for eighteen different categories in the economy for two different time periods.

For the 2002 rankings, the time periods include the 15-year term from 1976 through 1990 and the 10-year term from 1991 through 2000.

The eighteen categories include the following:

- Per Capita Personal Income
- Earnings – All Workers
- Employment – All Workers
- Average Earnings Per Worker
- Wage & Salaried Workers – Earnings
- Wage & Salaried Workers – Employment
- Wage & Salaried Workers – Average Earnings Per
- Nonfarm Proprietors – Earnings
- Nonfarm Proprietors – Number of
- Nonfarm Proprietors – Average earnings per
- Retail Trade – Earnings
- Retail Trade – Employment
- Retail Trade – Average Earnings Per Worker
- Construction – Earnings
- Construction – Employment
- Construction – Average Earnings Per
- Medical Transfers to the Poor
- Income Maintenance

These categories are chosen as they reflect how the economy is behaving, not what is causing it to behave in a particular manner. Additionally, related categories were used to create redundancy to compensate for anomalous data.

The average deviation from previous year (DEV) and the average annual increase (AAI) were calculated for each category for each time period. The DEV was subtracted from the AAI to create a deviation factor for each category. Each category was adjusted to give each equal weight. The data for both the 15-year and 10-year terms were totaled for each of the categories. The total for the 10-year term was doubled (giving the last ten years twice the emphasis of the previous fifteen years) and added to the total for the 15-year term.

From the totals, the 318 metropolitan areas were given an “Economic Strength Ranking.” The Austin-San Marcos, TX MSA is ranked the strongest economy in the nation and the Odessa-Midland, TX MSA the weakest.

Following are the strongest and weakest 25 economies. The entire list of all metropolitan areas, in alphabetical order, the respective 2001 economic strength ranking appears next.

Economic Strength Ranking – Previous Years

POLICOM Corporation has created rankings for the metropolitan areas for each of the last eight years based upon the previous 25-years of data. These rankings, along with the geographic definitions for the metropolitan areas, state maps, and a host of other information regarding local economies, are posted on its web site:

Economic Data

The following is the economic data used to create this Analysis. It is processed and published by the Bureau of Economic Analysis (BEA), U. S. Department of Commerce.

The Bureau of Economic Analysis is the official economic data collector and publisher for the Federal Government. Estimates made by the BEA are considered the “official” records for the country.

The data is considered “source data,” as it has been principally created from a review of administrative records as opposed to surveys and polls.

The data provided includes the earnings for the major industrial classifications to the “2-digit” SIC level. Employment is provided to the 1-digit SIC level. To protect the privacy of individual employers on a local level, employment is not provided to the 2-digit level, as this would result in extremely frequent data suppression.

Please note the following codes:

(D) Data suppressed to protect the privacy of an individual employer

(N) No data collected or reported

(L) Too little data for entry. In Earnings, this means less than individuals earned \$50,000 for the year. For Employment, this means fewer than 10 people were employed for the year.
